Response to Amendment

1. Applicant's amendment and remarks of June 22, 2007 have been entered.
2. The allowance of claim 15 is withdrawn with apologies in view of the newly cited prior art.
3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Rejections - 35 USC § 103

4. Claims 1, 2, 4-14, 16, and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Paul.

Paul discloses a dispenser for controlled release of volatile substances comprising a fragrance bearing means 58 covered on its top face and on its bottom face by control elements 50 and 55 that exert a control function that is dependent on the physical properties of the fragrance and the material properties of the control elements in which the elements 50 and 55 are bonded together, and another control element (housing 20) as recited. Although Paul discloses a fragrance bearing means, this means can also be a reservoir. The thickness and shapes as recited in claims 11 and 12 would have been matters of design choice since such a modification involves a mere change in the size or shape of a component which is generally recognized as being within the level of ordinary skill in the art. Regarding claims 13 and 14, it has been held that a recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from a prior art apparatus satisfying the claimed structural limitations.

Art Unit: 3752

5. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Paul in view of Martens et al.

Martens et al. teach an air treatment dispenser comprising an outer housing comprising gaps which is impermeable to the air treatment substance. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified the device of Paul by making the outer housing to have gaps that are impermeable to the volatile substance as taught by Martens et al.
